## SAFE LABEL REMOVAL FROM SYRINGES AND CARTRIDGES

**HURST CORPORATION** announces a new DL series label removal machine specifically designed to remove film type labels from small diameter glass syringes and cartridges. **HURST** Model SLR (Syringe Label Remover) utilizes custom made ultra sticky tape to remove both label and adhesive.

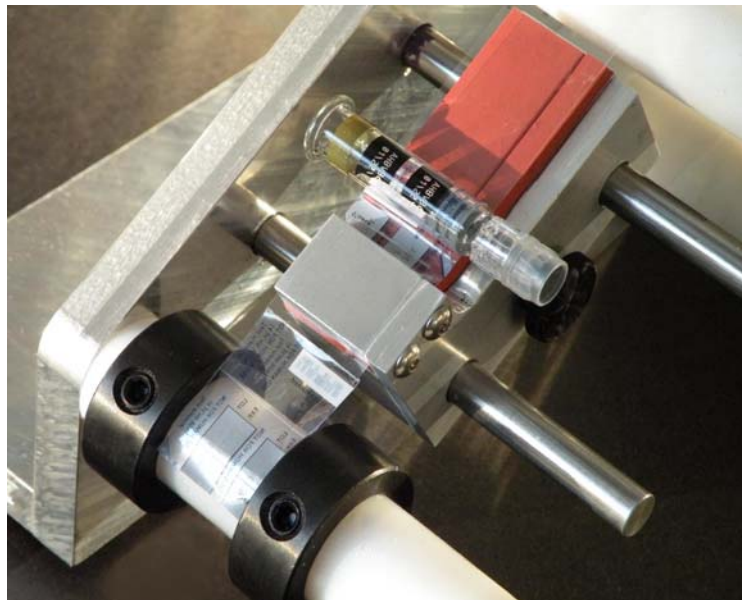

### How it works:

- Syringe or cartridge labels are pre-slit using the patented HURST Model SLS (Label Slitter). The SLS machine creates a lifted label edge and an opposing compressed label edge.
- Once positioned upon the SLR machine the advancing ultra sticky tape seizes the lifted label edge and subsequently unwraps the label.

### SAFE FOR OPERATORS SAFE FOR PRODUCT

**SLS** Label Slitting Machines combine with **SLR** Label Removing Machines to produce a safe way to remove labels from syringes and cartridges. Hand held razors and picks are completely eliminated.

HURST SLS and SLR machines can accommodate a wide range of syringe sizes and configurations up to 6" in overall length and up to 1" in diameter. HURST label removal tapes are available from 1/2" to 3" in width. Installation and training are available worldwide.
